MOHAMED HAKEM SHABAN EL-SAYED

Full Stack Engineer | Flutter, React, Node.js / NestJS

Giza, Egypt | +20 102 435 3182 | hakemm663@gmail.com | github.com/hakemm663 | raqmio.com

PROFESSIONAL SUMMARY

Full Stack Engineer who designed, built and released **Raqimo**, an AI-assisted invoicing, payments and finance platform for small businesses and freelancers, across a Flutter mobile app, a React web app and a Node.js / NestJS REST API on PostgreSQL (Supabase). The production website scores 98 Performance, 100 Accessibility, 100 Best Practices and 100 SEO in Google PageSpeed Insights (desktop), and the Android app is in Google Play closed testing. Backed by 2+ years of Flutter development (Clean Architecture, BLoC/Cubit) and 500+ delivered technical teaching sessions.

TECHNICAL SKILLS

Mobile: Flutter, Dart, BLoC/Cubit, Clean Architecture, MVVM, Repository pattern, dependency injection, Android and iOS release configuration, Firebase Cloud Messaging, RTL/LTR localization

Web: React, Vite, Tailwind CSS, JavaScript, responsive and accessible UI, code splitting, Core Web Vitals and SEO optimization, Content Security Policy

Backend: Node.js, NestJS, REST API design, authentication and authorization, rate limiting, CORS, audit logging, scheduled jobs (cron), serverless deployment on Vercel

Data: PostgreSQL, Supabase (Auth, SQL migrations), database constraints and triggers, multi-tenant data isolation, SQL test suites, SQLite

Integrations: Paymob payments, Groq LLM APIs, receipt OCR, WhatsApp sharing, PDF generation, Firebase (Auth, Firestore, Crashlytics, App Check), Google Maps, Agora RTC

DevOps and quality: Git and GitHub, feature-branch flow, GitHub Actions, Fastlane, build flavors, Firebase App Distribution, Google Play Console testing tracks, unit, widget and integration testing

Ways of working: AI-assisted development with Claude, code review of generated code, release checklists, technical documentation, mentoring

PROFESSIONAL EXPERIENCE

Founder and Full Stack Engineer (Mobile, Web, Backend) - Raqimo

Giza, Egypt (Remote) | 2026 - Present | raqmio.com

Invoicing, expenses, collections and AI-powered business insights in one product, delivered as a web app, a mobile app and an API.

Backend (Node.js, NestJS, PostgreSQL)

- Designed and built the REST API with authentication, tenant isolation, audit logging and a daily scheduled job that marks overdue invoices and sends notifications; deployed on Vercel.
- Moved business rules into the database so they cannot be bypassed: invoice lifecycle, totals, payment limits (no overpayment, forced currency), void rules and a free-plan limit of 10 invoices per month; verified with SQL test suites before every release.
- Hardened security through a dedicated migration that closed anonymous-callable database functions; added CSP and security headers and configured sign-in rate limiting, CAPTCHA and leaked-password protection at the auth layer.
- Integrated AI-assisted invoice and expense drafting with human review, receipt OCR, and Paymob checkout behind a feature flag.
- Defined one reporting model (sales, money received, net cash, best customers, debtors, ageing, expenses by category, forecast) so web, mobile and AI always show identical numbers.

Web (React, Vite, Tailwind CSS)

- Built the full web app on the live API: dashboard, invoices, customers, products, expenses, reports, notifications inbox, AI assistant and billing, bilingual Arabic/English with RTL support.
- Shipped public shareable invoice links with view tracking and PDF export.
- Reached 98 Performance, 100 Accessibility, 100 Best Practices and 100 SEO (PageSpeed Insights, desktop) and a field Real Experience Score of 90 (Great) through code splitting and security-header hardening.

Mobile (Flutter, Dart)

- Built the Flutter app with Clean Architecture and BLoC/Cubit: invoice send and void flow, payments, timeline, PDF sharing, WhatsApp to customer, receipt scan and attach, push notifications (FCM) and an AI proposal review screen.
- Prepared store-ready Android and iOS configuration; Android release 1.0.7 (build 8) is in Google Play internal and closed testing.

Flutter Developer - Self-Employed

Giza, Egypt | Apr 2025 - Present

- Built and maintained Flutter apps for real estate and healthcare using BLoC/Cubit, repository abstractions, get_it, Dio, go_router, Firebase and Supabase.
- Set up build flavors, GitHub Actions quality gates (format, analyze, test) and internal distribution workflows.

Coding Instructor - Filo

Remote | May 2025 - Present

- Provide one-to-one tutoring in programming fundamentals, problem-solving and web and mobile development, with code review and step-by-step debugging.

Computer Science and Mobile Development Instructor - iSchool

Cairo, Egypt | Jun 2024 - Feb 2025

- Delivered 500+ live sessions to 100+ students across Flutter, Dart, FlutterFlow, web development and UI/UX, keeping monthly quality scores above 92%.
- Promoted from Golden Instructor to Diamond Instructor for delivery quality and commitment.

EARLIER PROJECTS

- **DocDoc** - Flutter dental appointment app: dentist search and filtering, booking flow, Firebase/Supabase, secure storage, GitHub Actions and multi-environment builds (github.com/hakemm663).
- **Dwelleo** - bilingual Arabic/English Flutter real-estate app: feature-first Clean Architecture, BLoC, get_it, Dio, go_router, Crashlytics and App Check foundations.

EDUCATION

B.Sc. Business Information Systems - Canadian International College, Cairo, Egypt | 2020 - 2025

CERTIFICATIONS

iSchool Instructor Certifications (2024): Mobile App Development (FlutterFlow, Flutter and Dart), Web Development (HTML, CSS, JavaScript), UI/UX Design

LANGUAGES AND ADDITIONAL INFORMATION

Arabic: Native | English: Professional working proficiency | Military status: Officially exempted (2026)
